Subject: Re: Dimock samples

We should be able to issue preliminary reports for the RSK-175 analysis for most or all of the samples we have received so far before the end of the week. (BTW, we did not receive any samples today. Were we supposed to have received some? Will we receive samples tomorrow?)

I know we have had some samples that have required multiple dilutions to get methane within the cal range because levels have been in the thousands, but not sure if any exceed 28,000. I will inquire and let you know verbally tomorrow.

Subject: Dimock samples

Hi Rich, I don't mean to bug you about this but, Cindy Caporale wanted me to check with you and see if you could possible give us an estimate as to when you might be able to send us the methane data, for whatever samples you have completed. What is really needed is to know whether any of the results are greater than the screening level of 28,000 ug/L. If that is something you could send as soon as you know it, that would be helpful. But, if this doesn't make sense, just let me know. thanks!
